

Jetspeed2 GettingStartedOnWindows

Using the Binary Distribution

Follow the instructions in the [ReadMe File](#) instead of the [Getting Started](#) page.

- Download the jetspeed-2.0-M1.zip file (start at <http://portals.apache.org/download.html>)
- Unzip the file and overlay the contents on your Tomcat installation
- Visit the jetspeed-database directory and execute the start-database script
- Start Tomcat
- Visit <http://localhost:8080/jetspeed>

(Except for the name of the file (.zip instead of .tar.gz) these instructions should also work for the binary distribution on Unix/Linux.)
