

# UltraEdit

ultraedit.txt is a 'WordFile.txt' addition for Ultraedit (<http://www.ultraedit.com/>) that highlights Velocity keywords.

It was originally contributed by Herve Guidetti

<Herve.Guidetti@idbsoft.ch> with additional tweaks and comments by Wido Hillmann <wido.hillmann@epost.de> and Stephane Bailliez <sbailliez@apache.org>

1) Go into [UltraEdit](#) home directory. 2) Add the content of the file to the end of your word.txt file 3) Modify the number on the first line (/L9 in this case), so that it matches your word.txt definition. (it's incremental) 4) Edit a .vm template with [UltraEdit](#). You should now have syntax coloring for Velocimacros.

**ultraedit.txt:**

```
