VelocimacroLibrary

Velocimacro Library

The mailing list often has questions/suggestions for for common macros. We'd like to gather the good ones here. 🙂 Contributions are welcome!

- VelocityGenericMacros – non-web macros, applicable in **any** Velocity setting, these might make use of the Generic Tools.
- VelocityViewMacros – web-oriented macro and/or make use of VelocityView tools (using the recommended keys!)
- VelocityStrutsMacros – applicable for VelocityStruts applications, and will generally but optionally use the Velocity-Struts tools (using recommended keys!).

TODO:

- document recommended keys for each standard tool
- write plan/instructions for using the $XHTML setting for VelocityView and VelocityStruts macros
- develop/document standard coding style for macros
- develop/document standard way of documenting macros (maybe using http://www.chickenshick.com/velocidoc/?)
