

C++StreamTransport

Thrift Transport for C++ Streams

As I had problem with the `TFileTransport` (those described at <http://publists.facebook.com/pipermail/thrift/2008-January/000357.html>) I wrote a transport for C++ streams.

There are three classes of interest:

InputStreamTransport

`InputStreamTransport`

OutputStreamTransport

`OutputStreamTransport`

StreamTransport

`StreamTransport`

All of these classes have a constructor taking a `boost::shared_ptr<StreamT>` in parameter and can be used as any other thrift transports.

[StreamTransport.hpp](#)

`StreamTransport.hpp`

Updates

1. Initial version 2. Changed license and facebook namespace reference to apache.
