Testing

Here's how you can help us test the distribution prior to a vote.

Download a the distribution assemblies:

- <http://people.apache.org/builds/myfaces/core-1.1.4/>

Configure a <repository> for Maven 2:

```
<repository>
  <id>myfaces-114-staging</id>
  <name>Apache MyFaces Core 1.1.4 Staging Repository</name>
  <url>http://people.apache.org/builds/myfaces/core-1.1.4/m2-staging-repository</url>
</repository>
```

And declare dependencies on the 1.1.4 artifacts:

```
<dependency>
  <groupId>org.apache.myfaces.core</groupId>
  <artifactId>myfaces-api</artifactId>
  <version>1.1.4</version>
</dependency>
<dependency>
  <groupId>org.apache.myfaces.core</groupId>
  <artifactId>myfaces-impl</artifactId>
  <version>1.1.4</version>
</dependency>
```

Note: Maven 2.0.4 will **not** download a new version if one is already present in your local repository. You will need to **delete** \$M2_REPO/org/apache/myfaces/core to force Maven to download the new version. (Usually, \$M2_REPO is <your home directory>/m2/repository.)

Then, let us know the results (good or bad!) on *dev* at *myfaces.apache.org*. (You must be subscribed to post. See: <http://myfaces.apache.org/mail-lists.html>.)

JIRA

- Add a new version to the core project 1.1.4
- Do a bulk change for all resolved issues with version fixed as 1.1.4-SNAPSHOT and change to 1.1.4
- Do a bulk change for all resolved (but not closed) in 1.1.4 and close them
- Archive the 1.1.4-SNAPSHOT version

Deployment

To deploy the api and impl jars, including -sources and -javadocs, to <http://people.apache.org/repo/m2-snapshot-repository>:

```
cd /path/to/SHARED_2_0_3
mvn install
cd /path/to/CORE_1_1_4
mvn deploy -Pgenerate-assembly
```

To build and publish the -src and -bin assemblies to people.apache.org:

```
cd /path/to/SHARED_2_0_3
mvn install
cd /path/to/CORE_1_1_4
mvn install -Pgenerate-assembly
cd assembly
mvn assembly:assembly
scp target/assembly/out/* people.apache.org:/www/people.apache.org/builds/myfaces/core-1.1.x
```
