Apache JDO 2.1.1 Release Testing

This page describes the release testing for the GA release of JDO 2.1.1. This is a bug fix release. It includes fixes for the following issues:

- <http://issues.apache.org/jira/browse/JDO-584>
- <http://issues.apache.org/jira/browse/JDO-585>
- <http://issues.apache.org/jira/browse/JDO-586>
- <http://issues.apache.org/jira/browse/JDO-593>
- <http://issues.apache.org/jira/browse/JDO-600>
- <http://issues.apache.org/jira/browse/JDO-601>

Test Procedure

In testing the release candidate, follow these steps.

1. Download the tck2 and tck2 legacy releases from <http://people.apache.org/~mcaisse/jdo2.1.1/dist/db/jdo/2.1.1/>.
2. Extract the files.
3. cd to the jdo2-tck-2.1.1 or jdo2-tck-legacy-2.1.1 directory.
4. Edit project.properties, replacing the following line in the maven.repo.remote property assignment:

```
http://repol.maven.org/maven,\
```

with

```
http://people.apache.org/~mcaisse/jdo2.1.1/dist/java-repository,\
```

1. The JNDI test cases in tck2 are configured to use Sun's JNDI implementation. To download, go [here](#), click the Download button at 'Download JNDI 1.2.1 & More', accept a license agreement, download 'File System Service Provider, 1.2 Beta 3' and then unpack the downloaded zip. Put the included jars fscontext.jar and providerutil.jar into the lib/ext directory.
2. Run *maven build*
3. Repeat for tck2-legacy
