

HowToPublishJarsToApacheMavenRepos

REPOS

Apache hosts two Maven repositories - one for released jars and one for unreleased jars:

minotaur:/www/www.apache.org/dist/java-repository/

- ONLY for released code
- URL: <http://www.apache.org/dist/java-repository/>
- gets mirrored to ibiblio
- Inform the PMC when you've added something new, by sending an email to [pmc AT ws.apache.org](mailto:pmc@ws.apache.org).

minotaur:/www/cvs.apache.org/repository/

- for all nightlies, snapshots and unreleased code
- URL: <http://cvs.apache.org/repository/>

NOTES

- Both repos should contain ONLY Apache projects.
- Don't upload jars of projects that you are NOT responsible for. Instead engage w/ those projects' dev teams via their mailing lists.
- Don't forget to generate MD5 files for each new jar.
- For non-Apache projects, upload the jars directly to ibiblio. See <http://maven.apache.org/repository-upload.html>.
