jUDDI Wiki

<http://ws.apache.org/juddi/images/juddi.gif>

Welcome to the jUDDI Wiki! jUDDI (pronounced "Judy") is a Java-based implementation of the Universal Description, Discovery, and Integration (UDDI) specification for Web services. Here you'll (eventually) find some useful information on how to use UDDI, jUDDI, the user interface as well as information for developers, both interacting with jUDDI and for contributing to jUDDI's code base.
