

# Tapestry5LayoutWithMenu

[Tapestry5LayoutWithMenu](#):

This is an example for a Layout with a menu attached to it:

Here is an example Layout.tml:

```
<html xmlns:t="http://tapestry.apache.org/schema/tapestry_5_1_0.xsd" xmlns="http://www.w3.org/1999/xhtml" xmlns:p="tapestry:parameter">
..
  <t:menuHolder id="menu">
    <t:menuItem page="Page1"/>

    <t:menuItem page="Other" isPage="false">
      <t:menuItem page="Page2"/>
    </t:menuItem>
  </t:menuHolder>
```

---

Now let's have a look at the [MenuHolder](#) and [MenuItem](#) components.
