

bin/nutch junit

JUnit is an alias for junit.textui.[TestRunner](#)

This class takes one JUnit test class and runs it from the command line.

Usage:

```
bin/nutch junit <testClass>
```

<testClass>: This is the test class you wish to execute e.g org.apache.nutch.crawl.[TestInjector](#)

Before the junit command can be used, it is essential to build all test classes prior to executing the ant runtime target as follows:

```
ant compile-core-test  
ant runtime
```
