

FOM%context

FOM: The Context Object

---methods---

- getAttribute(name)
- getAttributeNames()
- setAttribute(name,value)
- removeAttribute(name)
- getInitParameter(name)

---properties---

[name] -> maps to the attribute indicates with the name

For example context.blah is equivalent to context.getAttribute("blah")

or as **alternative**:

[name] -> maps to the attribute indicates with the name

For example context.blah is equivalent to context.getInitParameter("blah")
