MaxClientsWarning

If you see messages like this:

```
spamd[3279]: prefork: server reached --max-clients setting, consider raising it
```

You'll probably try raising the `--max-clients` setting, only to find that that switch does not exist. This was a typo; the correct settting is called `--max-children`.

See this mail from Matt Kettler for more details.

This bug was fixed in SA 3.1.1.
