

Release Notes 5.6.4

Tapestry 5.6.4 is a drop-in replacement for Tapestry 5.4, 5.5 and 5.6 releases. It's a recommended upgrade for previous 5.6.x releases but be aware of the warning below. To upgrade, just update the dependency in your build configuration (Maven POM, Gradle build script, etc.) – or [Download](#) the new JAR file -- and the new version will just work. However, please review the [How to Upgrade](#) instructions before upgrading.

The Tapestry JSON improvements (TAP5-2640) introduced an incompatibility with dependencies built with earlier versions than Tapestry 5.6.2.

The method `JSONObject#get(String)` will fail with a `NoSuchMethodError` exception due to a signature change to conform to the `Map` interface.

Possible workarounds:

- Use a newer version of the dependency build with at least Tapestry 5.6.2
- Shade the dependency and update it manually
- Fork the dependency and update it manually

Improvements made

Key	Summary	T	Created	Updated	Due	Assignee	Reporter	P	Status	Resolution
TAP5-2672	Improve reporting for errors in JS modules		Apr 08, 2021	Apr 08, 2021		Thiago Henrique De Paula Figueiredo	Thiago Henrique De Paula Figueiredo		RESOLVED	Fixed
