This is the [Apache Wiki](#) for the [Apache Incubator](#) and is maintained by the community.

Apache Incubator Whiteboard

The Apache Incubator Project (<http://incubator.apache.org/>) is dedicated to facilitating the smooth entry of valid new and donated code bases and community projects into the Apache Software Foundation.

This wiki is the whiteboard we use to collaborate on draft documents and receive extra suggestions and docs from anyone interested in helping. Of course the main process documentation is at <http://incubator.apache.org>

Incubating projects

See <http://incubator.apache.org/projects/>

Project proposals

Add new proposals [here](#). See [A Guide To Proposal Creation](#)

Board Reports

Incubator PMC must report to the ASF Board of directors [every month](#). The way this works is that incubating projects compile their own report of project status, and send that report to the Incubator PMC for aggregation and feedback. Your mentors will help in drafting the report.

The report is a collaborative effort of the committee, with the Chair (or a designated Report Manager) [setting up and sweeping up](#).

After a podling report is submitted, the Incubator PMC and the assigned [IncubatorShepherds](#) will review it and provide feedback where needed. Once all podling reports are reviewed, the IPMC chair will submit the combined report with a short summary to the ASF board.
