

DirectoryStructureLenya2.0-HEAD-build-lenya-webapp-lenya

This page describes the directory structure of Lenya under the build/lenya/webapp/lenya directory.

build/lenya/webapp/lenya

This directory contains all global lenya code as well as the working copies of your publications and all customizations (modules).

There are a couple of sitemaps:

- `i18n.xmap` - internationalization transformations (dereferencing of `<i18n:*>` tags)
- `import.xmap`
- `lenya.xmap`
- `module-resources.xmap`
- `resources-shared.xmap`
- `resources.xmap`

- `usecase.xmap` - handling of global usecases
[Please verify and fill in the blanks.]

And also a number of sub-directories:

build/lenya/webapp/lenya/bin

contains various scripts and command files for sftp transactions.

- `copy-recursive.sh`
- `replicate.sh`
- `sftp-copy-children.txt` - a command file for `sftp.sh`
- `sftp-copy-index.txt` - a command file for `sftp.sh`
- `sftp-mkdir-children.txt` - a command file for `sftp.sh`
- `sftp.sh` - an sftp wrapper that does not do anything interesting
- `tomcatctrl` - an almost but not quite LSB-conformant init script for tomcat

- `util.xml`
[Fill in the blanks. This looks like non-essential administrative stuff that someone felt like sharing with the world.]

build/lenya/webapp/lenya/config

Global configuration. No Files. Contains the following subdirs:

build/lenya/webapp/lenya/config/cocoon-xconf

Numerous XPatch files for various global usecases.

[Why is this needed? Isn't the global cocoon config patched at build time?]

build/lenya/webapp/lenya/config/parameters

Contains one file:

- `default.xsp` - a Java server page that seems to return `parameters.getParameter("value", "")`, whatever that means

build/lenya/webapp/lenya/config/rc

Revision-control configuration. Contains one file:

- `revision-controller.xconf` - defines that the rc mechanism uses "content/rcml" for housekeeping and "content/rcbak" as a backup directory

build/lenya/webapp/lenya/config/scheduler

Publication scheduler stuff. Contains one file:

- `scheduler.xconf` - seems to define "triggers" for scheduling

build/lenya/webapp/lenya/content

Global content (pages you will see when working with Lenya). Contains two files:

- `about.xml` - the "About Lenya" page
- `introduction.xml` - the "Welcome to Apache Lenya" page you get at the root of the servlet container

There are also the following sub-directories:

build/lenya/webapp/lenya/content/exception

Contains one file:

- `missing-language.xsp` - the error page you get when a non-existent language version is requested

build/lenya/webapp/lenya/content/menus

The menu contents of the Lenya GUI. Two files in here:

- `admin.xsp` - adds the "Logout" usecase to the "file" menu
- `live.xsp` - placeholder, adds nothing to any menu

build/lenya/webapp/lenya/content/rc

Revision control stuff. Contains four files:

- `fileReservedCheckInException.xsp` - error handler
- `fileReservedCheckOutException.xsp` - error handler
- `genericException.xsp` - error handler
- `view.xsp` - seems to create a "View" page with some DOM magic, quite abstract.
[Please explain when they are used, by whom, and what they do.]

build/lenya/webapp/lenya/content/search

Currently empty.

build/lenya/webapp/lenya/content/util

Contains one file:

- `empty.xml` - an empty xml file to be used as a dummy when everything happens in the XSLT

build/lenya/webapp/lenya/content/xopus

Contains one file:

- `error.xml` - a placeholder error message for the commercial XOPUS editor.

build/lenya/webapp/lenya/modules

Contains the global modules, each in their own sub-directory:

build/lenya/webapp/lenya/modules/bxe

The Bitflux editor.

[Why is there no Kupu modules here???)

build/lenya/webapp/lenya/modules/cforms

Cocoon Forms handler.

build/lenya/webapp/lenya/modules/homepage

The handler for the "homepage" resource type.

build/lenya/webapp/lenya/modules/jackrabbit

Configuration files for the jackrabbit implementation of the Java Content Repository API, and the implementation of the [JackrabbitRepositoryFactory](#) (java code).

[Verify!]

build/lenya/webapp/lenya/modules/jcr

Generic jcr handler.

[Verify!]

build/lenya/webapp/lenya/modules/lenyadoc

The [LenyaDoc](#) source factory implementation (java code).

build/lenya/webapp/lenya/modules/linkcheck

Java code, a client-side javascript helper and usecase for the link checker.

build/lenya/webapp/lenya/modules/links

The handler for the "links" resource type.

build/lenya/webapp/lenya/modules/lucene

The glue for the integration of the Lucene search engine, usecases and xslts for presentation.

build/lenya/webapp/lenya/modules/notification

The notification framework to inform users about workflow states.

build/lenya/webapp/lenya/modules/opendocument

The handler for the "OpenDocument" resource type.

build/lenya/webapp/lenya/modules/sitetree

The sitetree module. Provides the breadcrumbs, menus and tabs.

build/lenya/webapp/lenya/modules/svg

The handler for Scalable Vector Graphics. Uses the Apache Batik SVG renderer that's included in Cocoon.

build/lenya/webapp/lenya/modules/webdav

Usecases for WebDAV clients (up/download of content via the WebDAV protocol in order to use external editors on the client machine).

build/lenya/webapp/lenya/modules/xhtmll

The handler for the "xhtml" resource type.

build/lenya/webapp/lenya/pubs

This directory holds all publications (yours and the default ones). There is a brief description of its contents at [OverviewPublicationDirectories](#).

build/lenya/webapp/lenya/resources

build/lenya/webapp/lenya/xslt
