Release

Release checklist

1. Review: http://www.apache.org/dev/publishing-maven-artifacts.html
   - Make sure your pom is in a SNAPSHOT version
2. Test that your environment and settings: *mvn clean install -Papache-release*
3. Do a dry run: *mvn release:prepare -DdryRun=true*
   - You may need to specify a different tag directory
4. Inspect pom.xml.tag. This is the release pom.
   - If you need to start over, run: *mvn release:clean clean*
5. Publish the snapshot: *mvn deploy*
6. Clean the release: *mvn release:clean clean*
7. Prepare the release: *mvn release:prepare*
   - Note that this step commits the tag and updates pom versions
8. Stage the release: *mvn release:perform*
9. Login to: https://repository.apache.org/ (Sonatype), find the release and close it
   - If there are errors closing the release, you are not configured correctly, restart

10. Start a [VOTE] thread, include links to the release artifacts, the tag, JIRA issues, and README.

    - If the vote fails, drop the release in Sonatype and start over

    - If the vote passes, update the thread with a [RESULT] reply

11. Release the repo in Sonatype
12. svn checkout https://dist.apache.org/repos/dist/release/devicemap and checkin the release artifact
    - Remove the previous release if it exists
13. Update the website with the new maven and dist urls
