

Developer Information

This is a list of information useful to people *developing* Tapestry itself (rather than developers *using* Tapestry).

How Tos

- [Confluence Site Setup](#) – all about how Confluence is used to edit the content of the static documentation site
- [Release Process](#) – how to produce a release
- [Developer Bible](#) – coding & committing advice, including IDE choices, coding style, class naming conventions and bug tracking policies
- [Building Tapestry from Source](#) – how to build Tapestry itself
- [Version Numbers](#)

Developer Tools & Reports

- [Jenkins automated build results](#) – trunk
- [Cobertura code coverage report](#) – measures test coverage
- [Sonar code quality report](#) – measures test coverage, complexity & rule violations
- [Browse Git source](#)
- [The tapestry jail](#) – information about our FreeBSD jail at tapestry.zones.apache.org
