

MyFaces Commons User Guide

MyFaces Commons Project is a collection of components, converters, validators and other useful goodies not renderkit specific and not bound to any framework or JSF implementation.

It divides into several sub-modules:

- **myfaces-commons-utils** : Contains JSF utility methods and other useful code. Some code comes from MyFaces Shared project. See [API Documentation](#) for details.
- **myfaces-components** : Components that can be used with any jsf framework.
- **myfaces-converters** : Converters that can be used with any jsf framework.
- **myfaces-validators** : Validators that can be used with any jsf framework.
- **myfaces-resourcehandler** : JSF 2.0 ResourceHandler utilities and a Extended ResourceHandler implementation with additional options.
