

TPC-H Benchmark Set

TPC-H Benchmark

TPC-H is an ad-hoc and decision support benchmark. Some of queries are available in the current Tajo. You can download the TPC-H data generator from [here](#).

DDL for TPC-H datasets

TPC-H benchmark provides 8 table datasets. The below DDL statements is for them.

```

Q2

Tajo does not support scalar subquery yet. So, you should use multiple queries as follows:

```

create table nation_region as select n_regionkey, r_regionkey, n_nationkey, n_name, r_name from region join
nation on n_regionkey = r_regionkey where r_name = 'EUROPE';

create table r2_1 as select s_acctbal, s_name, n_name, p_partkey, p_mfgr, s_address, s_phone, s_comment,
ps_supplycost from nation_region join supplier on s_nationkey = n_nationkey join partsupp on s_suppkey =
ps_suppkey join part on p_partkey = ps_partkey where p_size = 15 and p_type like '%BRASS';

create table r2_2 as select p_partkey, min(ps_supplycost) as min_ps_supplycost from r2_1 group by p_partkey;

select s_acctbal, s_name, n_name, r2_1.p_partkey, p_mfgr, s_address, s_phone, s_comment from r2_1 join r2_2 on
r2_1.p_partkey = r2_2.p_partkey where ps_supplycost = min_ps_supplycost order by s_acctbal, n_name, s_name,
r2_1.p_partkey;

```

Q3

```
