Installation

Binary Distribution

Download the binary distribution and unzip it. The zip file includes sample configuration files

- Typical server set up : <INSTALL_DIR>/res/conf/ftpd-typical.xml
- Full example configuration file : <INSTALL_DIR>/res/conf/ftpd-full.xml

If you want to use your own jar files, you can put those jar files in system CLASSPATH or copy those jar files in the <INSTALL_DIR>/common/lib directory.

To run the server, go to <INSTALL_DIR> directory and execute ftpd.bat (if Windows) or ftpd.sh (if UNIX or Linux). In this case you need to pass the configuration file location. Usage:

```
ftpd [<options>] [<configuration file>]
   <options> := --default
   <configuration file> := <XML configuration file>
```

In case of no option, default configuration will be used.

Installing FtpServer as a Windows service

Binary Distribution Directory Structure

```
<INSTALL_DIR>
      |
      |--- common
      |      |
      |      |--- classes
      |      |
      |      |--- lib
      |
      |--- docs
      |
      |--- javadoc
      |
      |--- res
             |
             |--- conf
             |
             |--- home
             |
             |--- log
```
