Exec

Introduction

Rationale

Commons Exec is library to execute external processes from within a Java application. Doing so without using a library is a error prone task therefore many developers used the following approaches

- using ANT internally which is overkillripping ANT apart to get the desired functionality
- writing their home-grown library
- using plexux-utils

Initial source

The project is based on the ANT source code being the most mature implementation

History

- The project was accepted to join the sandbox in 2005 but was more or less dormant.
 Activity picked up again 2008
 The first release was 2009
