

# Modeler

## Component Overview

<pre>{{ <a href="http://jakarta.apache.org/commons/modeler/images/modeler-logo-white.png">http://jakarta.apache.org/commons/modeler/images/modeler-logo-white.png</a> }}</pre>	<p><a href="#">Commons-Modeler</a> provides mechanisms to create Model MBeans compatible with the Java Management Extensions (JMX) specification. A lot of information is available on the <a href="#">Modeler website</a>. If you don't find the information you need you can always contact us using one of the <a href="#">mailing lists</a>.</p>

## How To's

- [Wrapping up a simple POJO using BaseModelMBean](#). This shows how to simply wrap up a simple Java bean using the Modeler's [BaseModelMBean](#) and expose it to JMX. Also has some sample on how to use the Registry class. It's a straight copy from my original blog post (*see below*).

## External Resources

<p>I have put together a sample of how to simply wrap up a simple POJO using <a href="#">BaseModelMBean</a> on my blog here:</p> <p><a href="http://liviutudor.com/2011/12/22/apache-commons-modeler-simplesample-usage/">http://liviutudor.com/2011/12/22/apache-commons-modeler-simplesample-usage/</a></p> <p>. I will try and add a separate wiki page and copy the contents on this wiki, in the meanwhile, I thought of sharing the link here.</p>
<p>Do you have a good example, add it here!</p>

## FAQ

<p>Add your questions/answers here.</p>
---

Q: How do I get rid of the attribute `modelerType`, that is added by the modeler?
