

ValidatorRequiredRequiredIf

Up to [ValidatorFaq](#)

My question is:

if a field is a condition required date field, then i must write like

```
<field property="periodTo" depends="requiredif,date">
```

Or can I write like this?

```
<field property="periodTo" depends="date,requiredif">
```

That's how it works by design. required or requiredif need to come before optional validations. Validations like date won't fire unless there's some actual data.
