To checkout trunk:

Using Git

Pending a VOTE

This page will become valid if the VOTE for Apache Tika to move to using Git passes.

```
git clone https://git-wip-us.apache.org/repos/asf/tika.git
```

(Deprecated) Old Method using SVN

```
svn checkout https://svn.apache.org/repos/asf/tika/trunk tika.trunk.
```

If you prefer git, you can clone repo mirror from github: `git clone https://github.com/apache/tika.git`.

To run all tests: `mvn test`

To run a single test: `mvn test -Dtest=RTFParserTest -DfailIfNoTests=false`

To run a single integration test: `mvn verify -Dit.test=BundleIT -Dtest=non-existing-test -DfailIfNoTests=false`, to run integration test building only relevant part command like `mvn -am -pl tika-bundle verify -Dit.test=BundleIT -Dtest=non-existing-test -DfailIfNoTests=false` could be used.

Maven (Surefire plugin) by default suppresses the stack trace when you hit a failure; if you want to see it add `-Dsfire.useFile=false` to the command-line.
