BoardReport-August2012

Apache Turbine Project Board Report, August 2012

Apache Turbine is a servlet based framework that allows experienced Java developers to quickly build web applications. Turbine allows you to use personalize the web sites and to use user logins to restrict access to parts of your application.

Turbine is a matured and well established framework that is used as the base of many other projects.

Status

The Turbine project has as usual seen low levels of activity in the last quarter.

The Turbine project has no board-level issues at this time.

Project Branding Board Report Checklist

The last issue left is

- TODO: Logos and Graphics : include TM

Community changes

No new committers were voted in since the last board report.

No new PMC members were voted in since the last board report.

Turbine core project

The Turbine core project proceeds slowly to the next milestone release which shall include a modified security implementation and support for the Quartz scheduler to replace the built-in one.

Fulcrum component project

The Fulcrum security components are being prepared to be included in the Turbine 4.0M2 release. Several other Fulcrum components have been updated and will be released subsequently.

- A vote on the fulcrum-upload, version 1.0.5 RC2 release has been successful. The publication of the release will follow shortly.
  ### META project
  There has been no activity on the META sub-project in this quarter.

No beta or final releases were made since the last board report.
