Trademarks

Check our project name against Trademarks

One of the very important things that needs to be done by *every* Podling is to check the name against registered Trademarks. A good tool to look at Trademarks can be found at the website of the United States Patent and Trademark Office.

Make sure that the requested project name does not already exist and be sure that the name is not already trademarked for an existing software product.

- TODO: How to deal with tools / search engines like nameprotect.com ?
