

API

APIs

Name	Description	Default URL prefix	Status
Original	Deprecated - This is our original "REST-like" API	/api	Available
Streaming	Current - This is our newest API that deals allows for streaming-based access	/api2	Available
Twitter	Twitter - We also support the Twitter API which allows for clients that support laconica to also use Apache ESME	/twitter	Available
JMX	This is an API that will users to access JMX-based	/jmx	Currently being designed

Note: It is possible to change the used URL prefixes for the individual APIs via properties.

Using an API

Clients should be developed using /api2.

If you wish to use a API, then you must take the server name and add the URL prefix.

For example, <http://esmecloudserverapache.dickhirsch.staxapps.net/twitter>

Token

All these APIs require that you use a token.
