

Nutch2Plugins

There are few plugins in Nutch that need to be ported from 1.x to 2.x. Due to this reasons, the below plugins give errors when building with eclipse or when using them during the crawls.

1. Feed

2. Parse-swf
3. Parse-zip
4. Parse-ext

If you are trying to build Nutch 2.x with Eclipse, please do not add the above plugins in the build path if you are following the tutorial at <http://wiki.apache.org/nutch/RunNutchInEclipse#preview>.

IndexMetatags plugin

The **IndexMetatags** plugin is not currently included in Nutch 2.x series, and there is a patch for adding this. Please follow <https://issues.apache.org/jira/browse/NUTCH-1478> for more instructions
