

CommonRewrite

Common Rewrite Issues

Below is a list of commonly seen Rewrite issues. This list has been compiled from the most common issues in #apache and from the users@httpd.apache.org support list.

Please note that these fixes below may not apply to your environment directly. You need to fully understand what the rewrite rule is doing, and don't forget to make sure the RewriteRule is in the right context for your requirements.

Title	Description
HTTP to HTTPS	Force users to use HTTPS (SSL) for either the entire site, or a specific sub-directory.
