Apache HTTP Server Wiki

This is a wiki containing user-contributed recipes, tips, and tricks for the Apache HTTP Server (aka *Apache Web Server* or httpd).

As this is a public wiki, please remember to consult the [official documentation](#) to verify what you read here. (If something here breaks your website, sorry!) Nevertheless, we hope you find this information useful!

User-contributed content

- [Face to Face](#) - Opportunities to meet httpd developers or users.
- [Contributing](#) - Find out how to contribute to this wiki
- [Info](#) - Useful information and documentation
- [Developer](#) - Information on the internals and module development
- [Log messages](#) - Detailed explanations, and their solutions
- [Application quirks](#) - Known incompatibilities between httpd and backend apps or user agents.
- [Platform quirks](#) - Build/install/run hints and workarounds for specific OS's
- [Compatibility](#) - Interaction between httpd, browsers and other user-agents, and other servers
- [Recipes](#) - Configuration examples, and their results
- [Rewrite](#) - Various guides for mod_rewrite
- [Scratch pad](#) - For new documentation - Howto's, document enhancements, etc.
- [Interacting](#) - Integration with third party modules and services.
- [Translations](#) - Unofficial translations of the official documentation, in hope of easing the review process.
- [PHP](#) - Installation instructions for PHP on Apache.
- [FAQ](#) - httpd FAQ sandbox
- [Binding to standard ports \(80,443\) without being root](#)
- [SSL](#) - (mod)SSL related topics

Official Links

- [Official Apache HTTP Server website](#)
- [Download the latest release!](#)
- [Browse the official documentation](#) (for the latest release - 2.4.x)
- [Find books on the Apache HTTP Server](#) and other ASF projects.
