

ThirdPartyBundled

There is nothing more disconcerting than looking at ps, top, or a Windows task manager window and seeing unfamiliar/unexpected programs. One of the top 3 security reports/FAQs is "Why did Apache take over my PC?"

To dispel concerns, and track why httpd or Apache.exe may be running on a system, here is a list of products known to (unexpectedly!) bundle Apache HTTP Server and run their own local, private copies of the server.

Windows Platform

Products known to bundle and run a local copy of Apache.exe

	<i>Product Name</i>
F	Fujitsu Siemens ServerView
N	NVIDIA Forceware Network Access Manager
T	Trend Micro Antivirus Clients (OfficeScan)
