

JavaScriptBof

Martin Cooper, Sylvain Wallez, Don Brown, Niall Pemberton, Patrick Lightbody

JavaScript is going through a rebirth with AJAX and server-side scripting, and a number of Apache projects are starting to include non-negligible amounts of JavaScript code. This Bof is about the cooperation among projects that could lead to a JavaScript Commons and/or welcoming one or more of the emerging JavaScript and DHTML frameworks to the Apache Software Foundation.

Note: this Bof is ***not*** about JavaScript tips and tricks, or the latest nifty effects library.
