

OpenSolarisBof

Apache and OpenSolaris/Solaris BOF

Daniel Price

Talk about [OpenSolaris](#) with the implementors.

Members of the OpenSolaris development team will host a wide-ranging discussion of topics relevant to developers and administrators. We hope to convince you that OpenSolaris/Solaris is the premiere platform for developing and deploying internet services. This is also a chance for you to bring your input about what should come next, and how Apache technologies should be incorporated into the OS. We'll also discuss ways to get involved in the OpenSolaris project.
