

# GumpBranches

## Gump2 SVN \*Active\* Branches

Gump maintains (currently) two branches **trunk** (it's main working branch, used by the test flavour) and **live** which is used for live public runs (public and jdk15 flavours).

## Upgrading "live"

```
mkdir work
cd work
svn checkout https://svn.apache.org/repos/asf/gump/trunk/ gump-trunk
svn checkout https://svn.apache.org/repos/asf/gump/live gump-live
cd gump-trunk
svn info # Note: store the revision number of the last change, i.e. R1.
cd ../gump-live
svn info # Note: store the revision number of the last change, i.e. R2.
svn merge -r R2:R1 https://svn.apache.org/repos/asf/gump/trunk/
svn commit # Updated live...
```

Note: since we \*never\* work in live, only in trunk ... (1)  $R2 \leq R1$  (2) No merge conflicts ought occur.
