

# AvalonFAQ ThirdParty

## How to I use third party resources in an Avalon application?

To Include Third Party JAR files in your Merlin app, add the following to your block.xml:

```
{{{ <container name="demo">
```

```
<classloader>
```

```
<classpath>
```

```
<repository>
```

```
<reosurce id="some-third-party:third-party-jar" versions="xxx"/>
```

```
</repository>
```

```
</classpath>
```

```
</classloader>
```

```
<component name="test" class="MyComponent" />
```

```
</container>
```

```
}}}
```

Where do I put the actually jars so that merlin can load them? --RobEvans
