*(this page is part of the wiki materials for [ApacheAvalon](#); avalon main page in the wiki is [AvalonProjectPages](#))*

## Fortress Release Plan

Fortress is mainly in need of documentation and updating the examples. After that, it is ready for a release.

- Add usage docs. How do I get started?
- Add config docs. How do I get what I need?
- Make sure [JavaDocs](#) are up to snuff.
- Update the examples.
- Document the examples. What should I expect? How do I make it work?
