# AvalonMerlin

*(this page is part of the ApacheAvalon project; see AvalonProjectPages for details)*

## The Merlin Wiki

The Merlin package contains a service management framework for course and fine grained components that can be used in stand-alone and embedded application scenarios.

Merlin 2 provides:

- a system kernel
- container hierarchies
- container assembly, deployment and decommissioning
- composite component blocks

Merlin 2 is based on the AvalonAssembly framework, AvalonMeta meta-model, and provides complete support for the AvalonLifecycle extension specification.
