Avalon Testimonials

Have you tried out Avalon yet? Have a success story you want to share? If so, edit this page and post it below!

```
   I recently did a rewrite of a small application and ported it over to
   Avalon.  The app had undergone several revisions and was starting to
   get crufty.  I knew it would work better under Avalon, but the results
   surprised me:

    - The complete rewrite took under two weeks.  The last major revision
      took over a month
    - Due to using Avalon's configuration package, 38 classes were
      eliminated.  (they had been generated with exolab's castor product)
    - Originally the application had 11736 lines of code, 7863 lines were
      from the castor generated classes, leaving 3873 lines of original code
    - After Avalonization, the entire project had only 1686 lines of
      code, cutting the original size in HALF!
    - Several new features were added and the entire design updated to be
      more modular
    - We even got a small performance speed boost

   This is another reason why Avalon rocks!  Thanks again guys!

I recently implemented Avalons IoC framework for my Bug Tracker. I was able to clean up my code by removing all those nasty singletons and factory classes
