Bookmarklets

Mozilla / IE bookmarklets for cocoon-view and GET parameter

I'm catching myself always doing the same thing while debugging with cocoon-views:
typing "&cocoon-view=debug1" at the end of my url in the browser all the time.

I wrote a few bookmarklets for Mozilla (seems to work in IE too). It needs a html file (with the JavaScript) for bookmarklets, so I attached one at the bottom of this wiki page.

Also a handy bookmarklet for making your GET Parameter more readable is included.

for cocoon-views check DebuggingWithViews
