FlashAndCocoonIdeas

This page is just a collection of Ideas, perhaps one day it might become an RT

Why are flash and cocoon a good combination?

- Both can be used to build web applications.
- Flash is moving away from animation towards, so called RIAs (Rich Internet Applications) WUI (Web User Interfaces).
- Both use EMCAScript languages for writing web applications. Advantage for attracting flash developers.
- Flash has support for XML. GET/POST, XMLLoad, XML Socket Servers, XUpdate, XPath, DataBinding, Etc.
- Woody could be rendered in flash. This is somthing I need now 🙂
- Connect to Cocoon / FlowScript via flash remoting using OpenAMF (LGPL). How do continuations fit with this?
- Flex using markup to create RIA in flash. Could woody markup be transfromed into FLEX markup. Can we do better.

More notes

- OpenAMF uses ASTranslator which does the grunt work and has an apache compatable licence.
- Have just checked and both ActionSctipt 2.0 and Flowscript are based on JavaScript 1.5 (ECMAScript 3)
