Latest Release

The current stable release is 2.1.12, which you can get at the [download area](#). There are no binaries available, you need to build it before running it.

Don't **worry** - this is really easy if you follow the instructions in the INSTALL.txt file that comes with the distribution. You just need to install a JDK (1.3.x, 1.4.x or 1.5.x) before, which is needed anyway to run Cocoon.

Release Tests

[ReleaseTests218](#)

What, no binary 2.1 release?

This was discussed at length on the cocoon-dev mailing list, see

- <http://marc.theaimsgroup.com/?t=104842959500001&r=1&w=2>
- <http://marc.theaimsgroup.com/?t=104844301400002&r=1&w=2>

The main reason is for build-time selection of which Cocoon components ("compile-time blocks") whereas runtime selection/activation of blocks is much harder to implement. It is aimed to have that implemented in one of the next versions of Cocoon.
