

RightsManagement

RightsManagement

Portal rights management restricts access to plugins, methods inside the plugins or to actions inside the methods. It is configured via an XML-File (the auth-file you pass to the [PortalToolManager](#), not fully implemented yet, it's a simple textfile atm)

⚠ [RightsManagement](#) is currently under development and may change.

Configuration (auth.xml)

Current Configuration

Simple properties file with a url pattern on the left side and the allowed roles on the right side:

copletManagement/showTab=admin

copletManagement/showTab*=admin

copletManagement/selectSkin*=admin+guest

New Configuration (proposal)

```
<auth>
  <plugin id="copletManagement">
    <functions>
      <function id="showTab">
        <roles>
          <role>admin</role>
        </roles>
        <users>
          <user>cocoon</user>
        </users>
      </function>
      <actions>
        <action id="moveUp">
          <roles>
            <role>admin</role>
          </roles>
        </action>
      </actions>
    </functions>
  </plugin>
</auth>
```
