

Security

- internal pipelines (not reachable from outside, but with cocoon: pseudo protocol): `<map:pipeline internal-only="true"/>`
- issues with paths, e.g. a `showfile` page where request param `file` specifies the file to show:

```
<map:match pattern="showfile">
  <map:act type="request">
    <map:parameter name="parameters" value="true"/>
    <map:read src="{file}" mime-type="text/plain"/>
  </map:act>
</map:match>
```
