SitemapBrowser

h1. Sitemap Browser I have developed a Sitemap Browser (SB) application written for Cocoon, using Cocoon. This is open source. (Can someone tell me what I need to do to release it under the ASF license?) h2. Attachments: * [^help.html] - The help file which explains what SB is and how it works * [^sitemap-browser.zip] - A snapshot of the (beta) source code \\ Comments and suggestions are welcome. Please [let me know|http://www.huttar.net/lars-kathy/sendusmail.html] if you try this out. h2. Installation: See instructions in [^help.html] h2. Testimonial: {{{Thanks a lot for your updating help page and source from your [SiteMap] Browser tool. I just installed it, it seems to work fine. It looks exactly like what I was searching, really usefull I guess. I'm astonished I'm the first person to ask you about SB !}}} h2. FAQ: * Q: How does SB relate to [Lepido], Anyware's sitemap editor? * A: They're complimentary, having different purposes. SB is a lightweight sitemap browser and testing assistant that works over the web. Lepido provides intelligent sitemap *editing* capabilities in Eclipse.
