TalkOverviewOfJakartaProjects

Like the one in a pretty table on the front page of http://jakarta.apache.org?

Hmmm.. more detailed than the table on the front page. You'd never know about the JSTL implementation, BeanUtils, or the Digester. PLUS, the format of the jakarta front page is very heavy. Why would "elsewhere", and "other news" come before the aforementioned pretty table. The point is http://jakarta.apache.org is a little heavy, Wiki allows us to build a more focused page. --TimOBrien

fair enough

Actually, I take it back, this page seems to be pretty useless. I'm taking it off the Home page, the last thing we need is useless Wiki pages.... --TimOBrien
