JcrContentModel

Best Practises for Content Models

- Simple
- Self-explanatory
- http://wiki.apache.org/jackrabbit/DavidsModel

Fundamental Decisions

Native JCR UUIDs vs. artificial UUIDs

- Native:
    - Automatic referential integrity checks
    - Find links to a page using `Node.getReferences()`
    - UUIDs generated by repository
- Artificial:
    - More flexibility re. modelling translations (multiple nodes can share a UUID)
    - Lenya 2.0.* repositories can be directly migrated
- Combination
    - Native JCR UUIDs for referential integrity
    - Lenya UUIDs for internal links

Referential integrity check (via reference properties) for internal links?

- Issues:
    - Pages containing links to non-published pages can't be published
    - Scheduled operations will fail (e.g. deactivation)
- Probably does more harm than good.

- Draft
- Site Structure
- Areas
- Translations
