ViewController

When to use init(), preprocess() and prerender()

In this thread, Craig suggests asking yourself the following questions:

1. Do I need the results of this computation in order to process a form submit?
2. Do I need the results of this computation in order to render the page?
   Then, based on your answers,

- Use init() for *(1) and (2)*
- Use preprocess() for *(1) only*
- Use prerender() for *(2) only*
