

ArchitectureTopics ContainerEvents

The RAVE JS container allows implementors to register for events generated by the container

Initialization Events

- Providers Initialized - triggered after all registered providers have been initialized
 - Register Method: `rave.registerOnProvidersInitializedHandler(callback)`
- Widgets Initialized - triggered after all the widgets have been initialized
 - Register Method: `rave.registerOnWidgetsInitializedHandler(callback)`
- UI Initialized - triggered after the UI has been initialized
 - Register Method: `rave.registerOnUIInitializedHandler(callback)`
- Page Initialized - triggered after the whole page has been initialized
 - Register Method: `rave.registerOnPageInitializedHandler(callback)`
