

# Board200809

## Board report June - September 2008

### Summary

=====

The Apache Harmony project delivered another milestone release containing Google Summer of Code contributions, bug fixes, and a notified security fix. The community is quiet but steady at the moment. The lack of a JCK continues to be an issue for Harmony.

### Development & Releases

=====

Development continues to be focused primarily on the Java 5 SE code stream and associated development tooling, with work on the Java 6 SE stream being limited to core areas of the class library. Work on the VM, JIT, and GC has slowed noticeably.

Milestone build 5.0M7 was declared on August 21, 2008. This milestone includes a number of fixes and enhancements, as evidenced by over 125 JIRA issues resolved and over 600 commits since our last milestone published at the start of May.

Noteworthy enhancements include:

- \* improved performance, especially in object serialization and pack200 decoding.
- \* a new 'javap' tool for class file disassembly, and good progress on 'policytool' the security policy management tool.
- \* lots of fixes in the Swing widget toolkit.

Six Google Summer of Code projects were assigned for mentoring by members of the Harmony community, but only two of those completed. We would particularly like to thank András Belicza (policytool) and Tharindu Mathew (Swing enhancements) for their contributions to the project!

### Security

=====

In July, the ASF security group advised the Harmony PMC of a vulnerability in our code. The issue is fixed in the milestone 7 release. The details of the vulnerability have not been fully publicly disclosed yet.

### Community

=====

The community continues to operate in a healthy manner, with a noticeable quiet period over summer.

We are pleased to see some Harmony code is being used in Sun's performance release of Java SE 6 (an improved TreeMap), and work done in the JikesRVM 3.0 project that enables that VM to run Harmony class library code.

There were no changes to committers or PMC membership during this period. There are currently 38 committers, ~18 of whom were active this period.
