

# StatusReports StatusReportForMay2007

## General Comments

No project-level issues at the moment.

---

## XML Graphics Commons

Not much activity here during the last three months. Only a new component in the PostScript area was added.

## Batik

Batik has released version 1.7beta1 after a longer period with no releases.

Otherwise, bugs are being fixed. Especially the newly added animation part is improved.

Cameron McCormack will be mentoring two Google Summer of Code students.

## FOP

No releases this quarter. We've had quite a few patches from new contributors. Not all have been processed, yet, as everyone is quite busy. Otherwise, we see the usual improvements/bugfixes happening. The most important additions this quarter were support for exact positioning of link destinations and for the collapsing border model.

Three team members, Jeremias, Vincent and Simon, met at ApacheCon Europe.
